Box Contents

- 6 x 1mm thermal pad
- 1 x 1.5mm thermal pad
- 10 x M2.5 x 10mm screw
- 10 x Red washer

Note: This backplate is only suitable for reference design RX Vega 56, RX Vega 64 and Vega Frontier Edition cards. If you are unsure if your card is a reference design card, contact us prior to installation to make sure.

1. Follow the Razor RGB – RX Vega manual up to step 8. Replace steps 9 and 10 with the steps below.

2. Remove the film from both sides of the thermal pads and place them on the location shown above. Place the red washers over the screw holes shown above.

3. Place the backplate onto the card, making sure the front thermal pads and washers stay in place. Now attach the backplate, starting with the four screws marked in green. Do not over tighten the screws as this may bend the card and cause permanent damage.

4. The card is now ready for use. When you first boot it is advisable to use monitoring software to check the core temperature. If the temperature is high you will need to remount the block.
